

SERVICE BRIEF

Network Security - Monitoring and Maintenance

How secure is your network? Is your sensitive corporate data at risk? It's time to get proactive.

Protect your Business Inside and Out

The Internet offers significant benefits to small and medium-sized businesses, but using it presents several risks to your network's security. From malware to data theft, layering protection into your

current IT infrastructure is becoming more and more important every day. We can help you by reviewing your company's security needs and finding a solution that works best for your business.

Content Filtering

Protect your users from harmful internet content.

Do you have employees getting distracted at work by social networks like Facebook and Twitter? Do you want to improve the work environment by blocking adult content that is simply not tasteful? Our content filtering solution lets you block inappropriate websites and content from being viewed in the workplace. Our flexible content filter solutions can be set up with customized policies that keep your employees from getting distracted by unauthorized online content, while still allowing them to search and browse the web as needed. Content filtering works alongside your firewall solution to block malware, a common occurrence on inappropriate sites, and to keep your IT infrastructure secure.

Antivirus

Spyware, malware, worms... the threats are abundant.

Ever since the Internet became prevalent in everyone's lives, viruses and spyware have done the same. Today, there are hundreds of thousands of viruses, and the number keeps growing. Viruses slow down workstations and network access speeds, and can often be attributed to data loss. As part of our proactive IT, we keep your antivirus licenses and definitions up to date to protect your bottom line. Our antivirus solution has a small footprint, keeping workstation bottlenecks at a minimum.

Firewalls and Network Protection Infrastructure

Prevent threats from entering your infrastructure.

While antivirus is vital to ensure a healthy IT infrastructure, precautions can be taken to stop viruses from entering your infrastructure in the first place. Prevent workstation downtime and slowness issues by integrating a firewall solution into your network infrastructure. We can help pick out the best firewall solution for your business so you get the most out of your budget. In fact, our solutions offer enterprise-level features for a small-business price. Stop dealing with workstation-based software firewalls that drastically slow down your end-users' computers. With a powerful firewall, you can prevent threats from entering your network in the first place, so you don't have to deal with them later.

Features

- Comprehensive Network Monitoring, Security, and Maintenance
- Managed Antivirus Protection
- Malware Protection
- Content Filtering and Blacklisting
- Managed & Monitored Firewall Solutions
- Flexible, Customized Solutions

Benefits

- Protection from harmful viruses and malware.
- Antivirus license management.
- Protection from external network attacks.
- Restrict access to inappropriate or unwanted web content.
- Blacklist sites that waste time such as YouTube, Facebook, and Twitter.
- Keep your network from getting bogged down, allowing users to be more efficient.
- Flexible, customized solutions to meet your organization's needs.
