

**SERVICE BRIEF**

Hosted Server and Infrastructure

Maintaining your own server and IT infrastructure is very costly. With FRS Pros, get exactly what your business needs without additional costs.

Outsource Your Infrastructure

Eliminate management and hardware expenses by hosting your server in the cloud.

Everybody has heard of the cloud, but many businesses are unaware of the many benefits that cloud hosting can offer small and medium-sized

businesses; namely the incredible cost savings. By hosting your server and other mission-critical applications in a reliable, properly managed fashion, you minimize your network's physical infrastructure and save on operational costs. Less hardware also means more office space that can be better leveraged to your advantage.

Best of all, hosted infrastructure can be managed by our IT experts to ensure constant reliability, stability, and security. We ensure that your data is always redundantly backed up in preparation for a worst-case scenario, and we maximize security to mitigate the chances of that happening.

Revolutionize your IT

Stop purchasing expensive hardware only to pay to administer, maintain, and manage it.

Our data center provides secure, reliable access to your servers. Forget about security patches, software updates, and hardware management.

FRS Pros's Hosted Server environment is scalable, giving you the ability to customize your solution to fit your business's unique needs.

Business Computing

Access files and applications from anywhere.

In addition to the numerous cost benefits and operational improvements, a hosted server infrastructure allows you to access your files from a number of different devices, whenever you want. This is perfect for businesses with multiple offices or employees who need to work from home or on the road.

With our Hosted Server solution, you can access critical productivity software, like Microsoft Office and your CRM tools, in a virtual environment. In other words, your IT environment is fully managed in our secure data center. With greater functionality comes greater productivity, and the solution will quickly pay for itself in savings costs.

Infrastructure in the Cloud

Take your whole IT to the cloud.

FRS Pros offers a full range of hosted infrastructure solutions including data storage, desktop virtualization, and more. With a completely managed hosted IT infrastructure, you'll no longer have to worry about hardware and software upgrades again. Expand your horizons today with a free IT consultation from FRS Pros.

Features

- Remote Services
- Scalable Infrastructure
- Versatile Virtual Offices
- Fully Managed IT Systems
